## A Language Resource and Shared Vocabulary

We report the estimated resource level for the seven languages we experimented in this work. The number, which has been widely used to indicate resource availability, is taken from the CC100 XL corpus Lin et al. (2022).

One reason of the cross-lingual alignment might be that among the chosen concepts some had the same word form across languages with Latin scripts. To investigate this, we additionally calculate the ratio of identical word forms (compared to English concepts) for languages with Latin scripts:
